Exhibit A. This report explains the state of Respondent and the condition of Respondent's home that JJ has been living in which is extremely concerning to me. I am aware that officers made a report to the Department of Children and Family Services in Florida due to the mother's state and the condition of the home.

4. Since JJ came into my care, he has been thriving. I have attended to his daily needs, including his meals, formula, hydration, clothing, supervision, rest, hygiene including but not limited to long overdue nail trimming, and bedtime routine.

5. I had continued to use the same specialty formula that JJ was drinking as his sole source of nutrition while in mother's care, however, after the most recent doctor's appointment I am now switching JJ to Pediasure, as the Doctor indicated that formula was no longer sufficient and Pediasure was better for JJ's nutritional needs at this stage. JJ continues to resist solid foods. To address his nutritional needs, I am in the process of scheduling an appointment with a dietitian.

6. JJ has a dedicated sleeping area in my home. I have a crib set up for him with bedding and other supplies appropriate to his care. As JJ has had time to adjust, he is now sleeping through the night for ten hours on average in addition to taking one to two hour naps during the day, which he had initially resisted.

7. I have worked to establish a calm and consistent routine for JJ. I have provided regular nutrition, and I monitor his rest and hygiene. I have handled all aspects of JJ's day-to-day care, including his meals, rest, and sleeping arrangements.

8. I am attentive to JJ's cues and needs. When he becomes tired, I provide him an opportunity to rest and supervise him while he sleeps. I have also continued to make sure that he has appropriate space and equipment for meals, despite refusing to entertain solid foods.

9. As soon as JJ and I returned to California, I enrolled him in and obtained medical insurance coverage for him so that I could arrange and obtain necessary care for him.

10. I promptly arranged a pediatric appointment for JJ in Ukiah, California on the soonest available date. The appointment was scheduled with Dr. Kirsten Juliet for August 26, 2026, at 1:00 p.m.

Doc ID: 989919d5b6ef1c898b58ef17abcacd143c30143d

11. During his appointment, the pediatrician noted the following diagnoses at the appointment: feeding difficulty and mismanagement, social issues, developmental health problem, astigmatism, and he is behind on his immunizations. A true and correct copy of the after visit summary is attached hereto as **Exhibit B**.

12. She also issued an urgent referral to the Redwood Coast Regional Center, for immediate assistance with his intellectual developmental delays. I have already reached out to schedule an intake.

13. Our next follow up appointment with Dr. Juliet is October 7, 2026. I will ensure that JJ attends that appointment and all the appointments he needs in relation to his care.

14. I have also arranged a dental appointment for JJ. JJ is almost two and has never been to a dentist, however, given he solely consumes formula and given he sucks his thumb, I have concerns about his dental health.

15. I am currently in the process of scheduling an optometry appointment to address JJ's vision issues. Pursuant to medical records Respondent has been aware of this issue since moving to Florida, but has not followed up on it. I am making it a priority to arrange an optometry appointment for JJ so that his vision needs can be assessed, as it was reported quite some time ago that JJ has a stigmatism that could affect his vision longer term if not addressed.

16. I intend to follow the recommendations of JJ's medical, dental, vision, and nutritional providers and to obtain and maintain the information necessary to address his ongoing health and developmental needs. I will sign him up and ensure he attends any follow up care recommended.

17. My focus since JJ came into my care has been on his best interests; I have done all I can to meet his immediate needs, provide him a safe and stable home environment, establish a predictable daily routine, and promptly connect him with appropriate local medical, dental, vision, and nutritional care.

18. JJ has been thriving in my care. As the police reports indicate, JJ was not upset when he left his mother, nor was he in an environment in which he could thrive. Since he has been in my care, he is doing things I never thought possible; he is walking, running, speaking, laughing, and
